E. L. LONG
Alvin, Texas

The Largest Seed House In South Texas

All my seeds are tested for Germination before I offer them for sale.

1930-1931
PRICE LIST ON Nursery Stock

All Orange Buds taken from heavy bearing trees. This, together with a strong, healthy root system insures you long life trees and heavy bearers. Don't overlook the Pineapple pear—it is the money maker of South Texas.

December and January are the two best months to plant fruit trees.

Exhibition and Sales Ground—Hardy Street, Opposite Alvin Hotel.
1930 - 1931
Price List

IMPROVED SATSUM ORANGES
All Buds from heavy bearing trees

Budded on 2-year old roots, 6 to 12 inches .20
well branched and bushy

Amur River Pivot, 20 to 36 inch
$3.00 per hundred
Citrus trees should be pruned before planting. It is a safe plan with practically all plants that the tops and broken roots (if any) should be cut back before planting.

Set the trees the same depth they stood in the nursery rows. The exact point can be determined by the earth-mark, or the "collar". Citrus trees, particularly, are very much injured by too deep planting, and it is a safe rule with all trees and shrubs to set them a little higher than they grew rather than lower. Spread out the roots carefully by hand, and pack the earth well around them. When the hole is three-quarters filled up, pack thoroughly with the feet. This is important. More trees are lost from loose packing than from any other cause. After packing thoroughly, and before the hole is quite filled up, pour in water, especially if the soil is dry.

December and January planting brings best results. They get a better and earlier start in Spring.
